The first brief conveys findings on refugees' perspectives on the intersection of displacement and development programming.

These policy briefs are part of the X-Border Local Research Network program (X-BLRN), a regional Foundation initiative supported by Google.org. The X-BLRN is working with local and global partners to build a comprehensive understanding of the causes and impacts of conflict in border areas to support more effective policy making.

Networks, both formal and informal, play a pivotal role in helping to deliver services and aid in situations of displacement, and in promoting social justice and gender equality. The report showcases the diversity of networks working to advance peace and development in Southeast Asia.

Lessons on Network Strategies and Approaches

The importance of online business skills has skyrocketed during the pandemic. June 22 marked the first anniversary of the Go Digital ASEAN program, which provides training in basic digital skills to those most vulnerable to the economic shocks of the pandemic: workers and small entrepreneurs, particularly women and young people. Six Southeast Asian countries—Indonesia, the Philippines, Malaysia, Vietnam, Thailand, and Singapore—launched the program jointly in 2020 as a response to the pandemic.

The program has reached more than 2 million people, including women and youth, and workers in small businesses. It has been successful because of its focus on digital skills that are in high demand in the region, such as e-commerce and digital marketing. The program has also been successful because it has engaged local partners, such as non-governmental organizations and businesses, to deliver the training and support local economies. The program has also been successful because it has engaged local partners, such as non-governmental organizations and businesses, to deliver the training and support local economies. The program has also been successful because it has engaged local partners, such as non-governmental organizations and businesses, to deliver the training and support local economies.

Thailand: Revisiting the Pandemic: Surveys on the Impact of Covid-19 on Small Businesses and Workers

• During the pandemic, small businesses in Thailand faced significant challenges, including a drop in demand and revenue, and increased costs. The Go Digital ASEAN program helped small businesses adapt to these challenges by providing them with digital skills training.

• The Go Digital ASEAN program has also been successful because it has engaged local partners, such as non-governmental organizations and businesses, to deliver the training and support local economies.
